

# TOUCHLESS FAUCETS FINISHING TRENDS

## POLISHED CHROME

Resistant to rust and corrosion, chrome is both cost-effective and easy to clean.

The graceful chrome-plated finish is created through electroplating, which applies a liquid metal coating through electro deposition. As the deposited metal fuses to the base material, the refined and durable finish created is Stern's collection default.

## MATT BLACK

Powder coating is a finishing process in which a coating is applied electrostatically to a surface as a dry powder before heat is used to finalize the coating. The powder forms chemical bonds in the process, creating a flexible, durable finish that is highly resistant to corrosion, flaking, and scratching. Exceptionally versatile and easy to clean, powder coating does not show dirt, water spots, or fingerprints.

# PVD COATING

PVD coating (physical vapor deposition) is the process in which a solid material is vaporized in a vacuum and deposited onto the surface of the fixture. These compound materials are deposited atom by atom, forming a thin, bonded, metal surface layer that greatly improves appearance and durability.

## PVD Satin Gold

A velvety effect that goes well with contemporary and industrial styles.

## PVD Copper

Classic, warm and bold, copper has that unique “je ne sais quoi” to make it stand out.

## PVD Antique Bronze

Dramatic and striking, antique bronze lifts the ambiance with a touch of texture.

## PVD Brushed Nickel

Popular for its “stainless steel” appearance, PVD Brushed Nickel creates a sophisticated and cool look that hides fingerprints and water spots.

## STAINLESS STEEL AISI 316

Stainless Steel AISI 316 is a material that offers corrosion resistance, formability, strength, and easy maintenance. Combining elegant design with vandal resistant features, now more resilient than ever, our Stainless Steel AISI 316 series is long lasting even under the harshest conditions.
